

PRODUCT FOCUS: THE NEW TM12 SELF-PROPELLED MAST LIFT

Snorkel is proud to reintroduce the TM12 model name, marking the launch of our enhanced version of our popular mast lift:

- **New 0.5m roll-out deck extension, fitted as standard**
- **New hydraulically powered descent**

The TM12 was the original low-level access platform. We are returning to the popular TM12 nomenclature for this machine to mark the introduction of these new features. It has previously been marketed as the Snorkel M1230E.

NEW FEATURES:

1. Roll-out deck extension. Following the introduction of an extension deck option in 2012, we are making the 0.5m roll-out extension deck a standard feature on all TM12 machines. The new all-steel platform retains its current spacious platform area, but with the ability to extend the platform length by an additional 0.5m. The simple and smooth foot-operated roll-out deck extension has a solid deck floor with grip tape.

The extension deck is ideal for stockpicking and retail applications, where the operator may need to reach above low-level obstacles, such as shelving or signage. There is an option to order a TM12 without the extension deck for an additional charge. Please refer to the Snorkel Sales manual for details.

2. Hydraulically powered descent. The enhanced TM12 will feature a smooth hydraulically powered descent, replacing the existing gravity descent system. Powered descent provides the operator with the ability to proportionally control the speed of machine descent, improving their ability to precisely position the machine platform.

These new features are in addition to the many upgrades we have made to this machine over the past few years, including:

- **New control system** – easier to troubleshoot and common with slab scissor range
- **New saloon-door style entry gates**
- **Improved solid steel deck surface**

The Snorkel TM12 featuring the roll-out deck extension and powered descent are now in production at our UK-based Vigo Centre facility. Please contact your Snorkel Customer Service Representative for lead times and details regarding existing orders.

PRODUCT FOCUS: THE NEW TM12 SELF-PROPELLED MAST LIFT

TM12 KEY SELLING POINTS:

1. **All-steel chassis.** The TM12 is robust and durable, designed for a long working life.
2. **Lightweight and compact.** The TM12 fits through standard internal doors and is light enough to travel in passenger elevators.
3. **Flexibility.** With a safe working load of 227kg (500lbs), the TM12 can lift two people with tools, and now features a roll-out deck extension for use by one person. It is also rated for outdoor use, for one person.
4. **Platform stability.** The robust reverse concentric mast design ensures maximum platform stability, even when fully elevated, and it now benefits from smooth, proportional control of both elevation & descent functions.

KEY SPECIFICATIONS AT A GLANCE:

Max. Working Height	5.6m
Max. Platform Height	3.6m
Platform Capacity (SWL)	227kg
Platform Size (stowed)	0.74m x 0.96m
Platform Size (extended)	0.74m x 1.46m
Extension Deck Length	0.5m
Extension Deck Capacity	113kg
Ground Clearance	66mm
Gradeability	25%
Controls	Proportional
Tyres	305mm dia. solid rubber non-marking
Power Source	24V 4hp DC electric motor 4 x 220Ah batteries
Weight	830kg
